

Sage — Data Room · Future Caribbean 2026 · Finance, Payments & MSME Capital

Sage (sagepays.xyz) is an AI agent that pays people for verified work, inside on-chain limits it cannot exceed — and turns every payout into a credit record a lender can underwrite. Built solo by Shariq Shaukat. Live on two mainnet rails with real USDC since 13 July 2026 (GOAT Network) and 30 August 2026 (Starknet).

This room is the validation layer for the TRL self-assessment. Every number below is read from the settlement ledger and links to a page or a transaction a judge can open. Nothing here is typed in.

The evidence, strongest first

#	Claim	Proof	Where
1	An AI agent pays humans real money, autonomously, inside limits it cannot exceed	39 mainnet payouts · \$63.60 settled · 26 refusals with the reason on record · median 2m 55s from submission to payment	06-ledger-payouts.csv , 07-ledger-refusals.csv , https://sagepays.xyz/explorer
2	First autonomous mainnet payout — judged from a tester's own words, settled by the vault	tx 0x8df776...0069 on GOAT Network	https://sagepays.xyz/proof/0x8df7767860692a12fed6f90fe8a88d9a103686bbaa9ceee3d067a1e7c6250069 · screens/05-...png
3	Private payouts on Starknet — vault released → escrowed behind a Poseidon commitment → collected through the STRK20 pool into a shielded note	13 private payouts; receipt 0x2b03ed...49fb draws the private leg	https://sagepays.xyz/proof/0x2b03ed6532b29771723c996a667b468e367935d0c2ff839840d5f00656449fb · screens/06-...png
4	An AI earned under the same rules it pays under — an agent found a gig over the public MCP, published a wallet-marked deliverable, was paid	tx 0xb01203...d827	https://sagepays.xyz/proof/0xb0120330aba99dcf25d5aba913d1c8ecf341782653f1b20b4eaafa575155d827
5	The refusal ledger — access without integrity is a faucet; 40% of judged work refused, each with a written reason	26 rows	07-ledger-refusals.csv · https://sagepays.xyz/explorer
6	A verified cash-flow record per worker + a lender's view — published formulas over receipts, never a score; JSON and CSV per wallet; an advance facility repaid from the next payouts	live record and lender view	https://sagepays.xyz/record/0xDF70f6E8e656E5bb714fF0E8CA176d76F26890e3 · https://sagepays.xyz/lender?wallet=0xDF70f6E8e656E5bb714fF0E8CA176d76F26890e3 · screens/07-...png , screens/08-...png
7	Obligations in the region's currencies — J\$, TT\$, EC\$, Bds\$, G, RD\$, G\$, B\$,	live	https://sagepays.xyz/outcomes · screens/03-...png

#	Claim	Proof	Where
	BZ\$, Sr\$ + CAD/GBP/EUR/USD, converted once at a stamped, source-attributed rate, benchmarked against World Bank remittance-cost readings		
8	One person, one slot — public work asks for a one-time World ID proof; caps count the person across every wallet the chain links	live on production since 5 Sep	https://sagepays.xyz/verify · https://sagepays.xyz/graph/gig-1c3e_FjffE · screens/09-...png
9	The operator — fund once; the agent decides what work to buy next (where, never how much), proposes with its reason before a dollar leaves, and can be vetoed	live; proposes at \$0	https://sagepays.xyz/docs/operator · screens/10-...png
10	First place, OpenClaw bootcamp (August 2026) — the same code, judged on real mainnet usage	certificate	11-certificate/
11	Engineering rigour — 4,420 automated tests; live batteries on the shipping build: P-GEN 13/13 (anchor integrity 100%), P-DIRECT money invariants zero, P-OPERATOR 4/4, P-ROUTE 29/32 with zero premature money confirmations, P-VERIFY 5/5; 1,146 commits	02-technical-documentation.pdf \$batteries	https://github.com/shariqazee/sage
12	Compliance — OFAC SDN screening on every payout path; KYC honestly disclaimed; the compliance statement under 500 words	04-compliance-statement.pdf	https://sagepays.xyz/docs/compliance

TRL self-assessment: level 8 — full feature set, small user base

Level	What it means for Sage	Evidence
5	First real payout on mainnet to a real tester, no human in the loop	row 2 above (13 Jul / 29 Jul 2026)
6	Field pilot: founders launch campaigns; strangers do the work and are paid	24 people paid across 36 tester payouts (06-ledger-payouts.csv)
7	Reliable in the real environment: autonomous payouts across two mainnet rails, refusals on record	rows 1, 3, 5
8	Full feature set, small user base: gigs, grants, testing, private payouts, credit records, live	rows 6–9; 01-submission-overview.pdf ; 02-technical-documentation.pdf
9	Paying institutions: a programme or lender funds campaigns and draws on the records	not yet — the first J\$ grant and the first advance are scheduled (05-proof-runbook.pdf)

Level	What it means for Sage	Evidence
10	Scaling with proven traction	not claimed

Contracts

- **GOAT Network (chainId 2345)** — CampaignVault V2 per campaign, deployed from the factory; USDC 0x3022b87ac063DE95b1570F46f5e470F8B53112D8 . The vault derives the exact reward, enforces caps and replay protection; the settlement event is the source of truth.
- **Starknet mainnet** — SageVault (Cairo; a refused payout answers with a code on-chain) and SageClaims (escrow behind bearer claim links, integrates the STRK20 pool). Class hashes and deploy transactions are in the repository README, kept in one place deliberately.

Numbers, read from the ledger on 6 September 2026

\$63.60 settled across 39 mainnet payouts (GOAT 26, Starknet 13) · \$61.60 to testers across 36 payouts to 24 people · 26 refusals on record (40% of judged work) · median 2m 55s from submission to settlement · 0% taken from recipients on every payout to date · fee to the payer: a flat \$0.10 per settlement.
