

# Sage · Demo Day script

Future Caribbean · Sat 10 Oct · Finance & MSME Capital, 1:15–2:45 PM AST (22:15 Pakistan) · runs about 5:10 · 6:00 hard stop

## BEFORE YOU GO ON

1. Share your ENTIRE screen (not one window). Do Not Disturb on. Close every other app.
2. Keynote: Sage-DemoDay open and playing, on slide 1. The arrow key moves forward.
3. Chrome, BUYER window (your normal profile, signed in to [sagepays.xyz](https://sagepays.xyz)). Tab 1: [sagepays.xyz/launch?do=pay](https://sagepays.xyz/launch?do=pay) with the sentence already typed in “Describe the work”. Tab 2: the BACKUP job (posted and launched this morning, nobody has submitted to it).
4. Chrome, SELLER window (a second profile or an Incognito window), signed in with the seller's email. Any [sagepays.xyz](https://sagepays.xyz) page open.
5. Know the shop link by heart: <https://sagepays.xyz/stage/shop.html>
6. This paper next to the laptop. Water. Phone face down, silent.

One straight line: Keynote slides 1–4 → Chrome (buyer, then seller) → back to Keynote for 5–8. If you blank: look at the screen, say what is on it, breathe, next line.

## KEYNOTE SLIDE 1

### 1 · Opening

0:00 → 0:15

*Learn these three lines by heart.*

Hi, I'm Shariq, and I built Sage.

In the next few minutes I'll post a job, and an AI agent will check the work and pay for it. Live, with real money. Nobody will approve that payment, not even me.

But first, why it matters here.

KEYNOTE  
**SLIDE 2**

## 2 · The problem

0:15 → 0:45

Think of a seller in Kingston. She delivers, she gets paid on WhatsApp, and the proof stays in a chat.

So when she asks a bank for credit, she has nothing to show.

In Jamaica, small businesses are ninety percent of jobs, and over forty percent of firms say finance is a major constraint. Not bad businesses. Unrecorded ones.

KEYNOTE  
**SLIDE 3**

## 3 · Sage

0:45 → 1:10

Sage fixes the record by fixing the payment. It's an AI agent that checks the work, pays for it in minutes from a vault it can't overspend, and turns every payment into a record a lender can read.

And it's not a prototype. It has paid real people real money since July. In August it won first place, Grand Champion, at the OpenClaw Summer Bootcamp, from Metis, GOAT Network, ClawUp and CryptoChicks.

KEYNOTE  
**SLIDE 4**

## 4 · Live

1:10 → 1:15

Let me show you. Live, with real money, on Arc, where the dollar pays its own fee.

**CMD+TAB TO CHROME: THE BUYER'S WINDOW, ON SAGEPAYS.XYZ, ALREADY SIGNED IN.**

## CHROME BUYER

### Chrome · buyer · Post the job

1:15 → 2:10

I'm the buyer. I write what I want in one sentence, in my own money: put my shop's price list online, three items in Jamaican dollars, J\$160.

**CLICK "DRAFT WITH SAGE".**

Sage is turning that sentence into a real job: the steps, what must be true when it's done, and what counts as proof. Those are the rules it will judge by.

No forms, no categories. And one thing it never does: set the price. The money is mine to set.

**WHEN THE FORM FILLS, POINT AT THE RULES AND THE PRICE. TICK "ONLY PEOPLE I INVITE". CLICK "CREATE THE GIG".**

## CHROME BUYER

### Chrome · buyer · Launch it

2:10 → 2:30

Now I fund it. I don't send money to anyone. Sage creates a vault on chain, funds it from my account, and switches it on.

**CLICK "LET SAGE LAUNCH IT FROM YOUR ACCOUNT ON ARC".**

Live. The vault holds exactly the reward, and Sage can't pay a cent more.

**CLICK "THE BOARD". COPY THE ADDRESS: CMD+L, CMD+C.**

## CHROME SELLER

### Chrome · seller · Do the work

2:30 → 2:50

**SWITCH TO THE SELLER'S WINDOW (CMD+`). PASTE THE ADDRESS: CMD+L, CMD+V, ENTER.**

Now I'm the seller, a different person with my own wallet. I've already put my price list online.

**CLICK "SUBMIT EVIDENCE". TYPE THE SHOP LINK. CLICK "SIGN + SUBMIT EVIDENCE".**

Submitted.

## CHROME SELLER

### Chrome · seller · Sage decides

2:50 → 4:05

*The money moment. Slow down. Paid takes about a minute.*

**SCROLL DOWN TO "SAGE ACTIVITY".**

Watch. Sage is opening my page itself, not trusting my word.

It checks every rule the buyer set: three items, prices in J-dollars, the shop's name, and my wallet on the page, so nobody else can claim my work.

It has to quote the exact words it relied on. And it can say no: it has refused 26 times so far, every time with the reason written down.

And the money isn't with Sage. It's in the vault the buyer funded. The vault decides the amount; Sage can only say yes or no.

**IF IT IS STILL CHECKING, SAY NOTHING. SILENCE WHILE THE ROOM WATCHES IS FINE.**

**WHEN IT SAYS PAID: STOP TALKING FOR TWO SECONDS.**

Paid. Nobody approved that. Not me, not anyone.

**CLICK "PROOF" ON THE PAID LINE. SCROLL TO "SAGE DECISION RECEIPT".**

Here's the receipt: the decision, how sure it was, and the exact words from my page. Anyone in this room can open it.

**CMD+TAB TO KEYNOTE. PRESS →.**

#### IF IT STALLS

Drafting takes over 75 seconds, or launch fails: "Here's the same job, posted this morning." Open the buyer's second tab (the backup job), copy its address, and carry on from the seller step.

No Paid after 90 seconds: "It's still checking. Here's the one I ran earlier today." Cmd+Tab to Keynote and →. The next slide shows that receipt.

It says Held: "It held this one for a person to check. That's the guard working: it would rather wait than pay for weak proof." Cmd+Tab and →.

KEYNOTE  
**SLIDE 5**

## 5 · Receipt and record

4:05 → 4:30

*Works whether the live run paid or stalled.*

If it paid live: "That's the receipt you just saw, and that payment just became a line in my record."

If it stalled: "Here's the receipt from the run earlier today, and the record it became."

Verified income over thirty and ninety days, who paid me and for how long, how often my work passes. Published formulas over real receipts, not a black-box score. A lender reads it in one call.

KEYNOTE  
**SLIDE 6**

## 6 · Next

4:30 → 4:50

Now imagine where this goes. Next, you won't even post the job: you give Sage a goal and a budget, and it decides what to buy and tells you why before it spends.

Every small business gets an AI finance worker that pays on proof and turns every job into credit. After a hurricane, a programme could pay a thousand people for verified clean-up in minutes.

KEYNOTE  
**SLIDE 7**

## 7 · The ask

4:50 → 5:05

The engine is live. It needs the institutions it was built for: an MSME programme, a cooperative, and a lender who'd price verified cash flow instead of collateral. Twenty minutes with any of you is our next milestone.

**PRESS → FOR THE LAST SLIDE.**

KEYNOTE  
**SLIDE 8**

## 8 · Close

5:05 → 5:10

Sage. Payments that verify themselves. Credit records that write themselves. Thank you.

**THEN STOP TALKING.**
